📄 PROFILE

Frontend Developer with 1 year and 3 months of experience building enterprise web applications using Angular, TypeScript, JavaScript, RxJS, HTML5, CSS3 and SCSS. Skilled in reusable components, Reactive Forms, routing and REST API integration. Built order history with status tabs, search, sorting and pagination, user management, registration flows, Google Maps address lookup, audit history and invoice email features for the admin and customer portals of a logistics platform. Works in Agile/Scrum teams with developers and QA.

🏢 PROFESSIONAL EXPERIENCE

Trainee Consultant

TechOxileo Technologies Pvt. Ltd.

July 2025 – Oct 2026 | West Bengal

- Develop Angular modules for the admin and customer portals of a logistics platform using TypeScript, HTML5, SCSS and Bootstrap.
- Integrate REST APIs using Angular HttpClient and RxJS, handling request payloads, query parameters, loading states and errors.
- Build reusable components, Reactive Forms with custom validation, and modal dialogs shared across screens.
- Debug UI and API issues using Chrome DevTools and Postman.
- Manage feature branches, merges and conflict resolution in Git; collaborate with developers and QA in Agile sprints.

⚙️ TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Node.js, Java, SQL.

Frameworks & Libraries: Angular, RxJS, Angular Material, Angular CDK, React.js, Bootstrap, ng-bootstrap, ng-select, Hibernate.

Angular: Components, Services, Dependency Injection, Lifecycle Hooks, Directives, Pipes, Routing, Child Routes, Modules, Reactive Forms, Custom Validators

API Integration: REST APIs, Angular HttpClient, HTTP Interceptors, HTTP Headers, Cookies and Sessions, JSON, Error Handling

Tools: Git, GitHub, Postman, Visual Studio Code, Chrome DevTools

Practices: Responsive Web Design, Authentication and Authorization, Debugging, Production Support, Agile/Scrum.

📁 PROJECTS

ShipCarte – Logistics and Order Management Platform (Admin and Customer Portals)

Tech Stack: Angular 19, TypeScript, RxJS, Reactive Forms, Angular Material, Bootstrap 5, ng-bootstrap, ng-select, Google Maps and Places API, REST APIs, SCSS

Overview: Freight and shipping platform with two Angular apps: a Customer Portal for sign-up, orders, shipment tracking, users and invoices, and an Admin Portal for managing orders, customers, partners, invoices, users and audit logs.

Responsibilities: Built and maintained feature modules in both portals; integrated REST APIs with HttpClient and RxJS; created reusable components and modals; debugged UI and API issues with Chrome DevTools and Postman in Agile sprints.

Key Features Developed:

- **Order History:** API-driven order lists with status tabs (All, Scheduled, In Transit, Completed, Failed), server-side pagination, search, sorting and date-range filters.
- **User Management:** User list, add, edit, delete and reset password for admin and customer users, using one shared Add/Edit form.
- **Registration:** Customer sign-up and partner registration forms with validation and API integration.
- **Address Entry:** Google Places autocomplete and manual address entry, with country and state dropdowns loaded from APIs.
- **Audit:** Audit history screens for settings, customer and order actions.
- **Email Invoice:** Reusable dialog to email invoices and shipment documents to customers.

API Integrations: Order listing, status update and cancel; user add, update, delete and reset password; customer sign-up and partner registration; country and state lookup, address book and billing locations; audit event logs; email invoices and documents.

Key Challenges Resolved:

- Kept the order list's tab, search and sort state when users returned from order details, using a shared service.
- Mapped Google Places results to the API's country and state values, with manual entry as a fallback.
- Fixed wrong state values by reloading the state list whenever the country changed, including in edit mode.
- Made one Add/Edit user form pre-fill API data in edit mode and send the correct request in each mode.
